Title:

Perfect score:
78
Sequence:
1 AYHGYWQDDIYSL 13
Scoring table:
Gapop 10.0 , Gapext 0.5
Searched:
283416 seqs, 96216763 residues

Total number of hits satisfying chosen parameters:
Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0%
Maximum Match 100%
Listing first 45 summaries

Database : PIR 79:\* 1: Dirl:\* 2: Dir2:\* 3: Dir3:\* 4: Dir4:\* Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

A48305
alpha-amylase (EC 3.2.1.1) A precursor - Aspergillus awamori
C;Species: Aspergillus awamori
C;Species: Aspergillus awamori
C;Date: 03-Feb-1994 #sequence_revision 03-Feb-1994 #text_change 09-Jul-2004
C;Accession: A48305
R;Korman, D.R.; Bayliss, F.T.; Barnett, C.C.; Carmona, C.L.; Kodama, K.H.; Royer, T.J.;
Curr. Genet. 17, 203-212, 1990
A;Title: Cloning, characterization, and expression of two alpha-amylase genes from Aspe
A;Reference number: A48305
A;Reference number: A48305
A;Reference number: A48305
A;Residues: preliminary; not compared with conceptual translation
A;Residues: UNIPROT:Q02905
A;Residues: 1-498 «KOR»
A;Residues: UNIPROT:Q02905
C;Function:
A;Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A;Pathway: glycogen/stach degradation
C;Superfamily: Aspergillus alpha-amylase; polysaccharide degradation
C;Superfamily: Aspergillus alpha-amylase; polysaccharide degradation
C;Keywords: glycoprotein; glycosidase; hydrolase; polysaccharide service homology
C;Keywords: glycoprotein; glycosidase; hydrolase; polysaccharide degradation
C;Keywords: glycoprotein; glycosidase; hydrolase; polysaccharide degradation
C;Keywords: glycoprotein; glycosidase; hydrolase; polysaccharide degradation
C;Keywords: glycoprotein; glycosidase; hydrolase; glycoprotein; glycopr

A;Title: Cloning of the alpha-amylase cDNA of Aspergillus shirousamii and its expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     A; Molecule type: mRNA
A; Residues: 1-499 <SHI>
C; Function: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A; Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A; Pathway: glycogen/starch degradation
C; Superfamily: Aspergillus alpha-amylase; alpha-amylase core homology
C; Superfamily: Aspergillus alpha-amylase; hydrolase; polysaccharide degradation
F;121/Domain: signal sequence #status predicted <SIG>
F;124-91/Product: alpha-amylase ecre homology <AMY>
F;124-150/Product: alpha-amylase core homology <AMY>
F;18/Binding site: carbohydrate (Asn) (covalent) #status predicted
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A; Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö

C;Function:
C;Function:
A;Description: catalyzes the hydrolysis of internal 1,4-alpha-D-glucosidic bonds
A;Pathway: glycogen/starch degradation
C;Superfamily: Aspergillus alpha-amylase; alpha-amylase core homology
C;Keywords: glycoprotein; glycosidase; hydrolase; polysaccharide degradation
F;194-321/Domain: alpha-amylase core homology

NyAlternate names: LKA1 protein; raw starch-degrading amylase
NyContains: alpha-dextrin endo-1,6-alpha-glucosidase (BC 3.2.1.41)
C;Species Lipomyces kononenkoae
C;Accession: JC4510; PC4116
C;Accession: JC4510; PC4116
C;Accession: JC4510; PC4116

                             -1-SUBUNIT: Monomer.
-1-BIOTECHNOLOGY: Used in the brewing industry to increase the fermentability of beer worts (including those made from unmalted cereals), in the starch industry to make high maltose and high DE syrups (starch saccharification), in the alcohol industry to reduce fermentation time, in the cereal food industry for flour supplementation and improvement of chilled and frozen dough, and in the forestry industry for low-temperature modification of starch. Sold under the name Fungamyl by Novozymes.
-1-MISCELLANEOUS: The sequence of AMY1 and AMY2 is shown.
-1-SIMILARITY: Belongs to the glycosyl hydrolase 13 family.
-1- COFACTOR: Binds 2 calcium ions per subunit. Calcium is inhibitory at high concentrations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       R PDB; ZTAA; X-ray; A=22-499.

Shibuya I., Tamura G., Ishikawa T., Hara S.;

Cloning of the alpha-amylase conv. of Aspergillus shirousamii and its expression in Saccharomyces cerevisiae.";

Biosci. Biocchanol. Biochem. 56:174-179(1992).

-!- CATALYTIC ACTIVITY: Endohydrolysis of 1.4-alpha-glucosidic.

-!- CATALYTIC Binds 2 calcium ions per subunit. Calcium is inhibitory at high concentrations (By similarity).

-!- SIMILARITY: Belongs to the glycosyl hydrolase 13 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                        InterPro; IPR006589; Alp amyl cat_sub.

Royer T.J., Thompson S.A., Ward M., Wilson L.J., Berka R.M.,
"Cloning, characterization, and expression of two alpha-amylase genes
from Aspergullus niger var. awamori.";

Curr. Genet. 17:203-212(1990).
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
linkages in oligosaccharides and polysaccharides.
-!- COFACTOR: Binds 2 calcium ions per subunit. Calcium is inhibitory
at high concentrations (By similarity).
-!- SIMILARITY: Belongs to the glycosyl hydrolase 13 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gape

-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
-!- COFACTOR: Binds 2 calcium ions per subunit. Calcium is inhibitory
at high concentrations (By similarity).
-!- SIMILARITY: Belongs to the glycosyl hydrolase 13 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        SMART; SM00642; Aamy; 1. "Molecular structure of the SWA2 gene encoding an AMY1-related alpha-amylase from Schwanniomyces occidentalis.";
Curr. Genet. 24:75-83(1993).
-!- CATALYTIC ACTIVITY: Endohydrolysis of 1,4-alpha-glucosidic
                                                                                                                    linkages in oligosaccharides and polysaccharides.
-!- CORACTOR: Binds 2 calcium ions per subunit. Calcium is inhibitory at high concentrations (By similarity).
-!- SIMILARITY: Belongs to the glycosyl hydrolase 13 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 6, Application US/08470702

Patent No. 5631149

GENERAL INFORMATION:

HOPLICANT: MATSUI, IKUO

APPLICANT: MATSUI, IKUO

APPLICANT: MYAIRI, SACHIO

TITLE OF INVENTION: VARIANT-TYPE CARBOHYDRATE HYDROLASE,

TITLE OF INVENTION: VARIANT-TYPE CARBOHYDRATE HYDROLASE,

TITLE OF INVENTION: VARIANT GENE OF THE ENZYME

TITLE OF INVENTION: OLIGOSACCHARIDE USING THE ENZYME

NUMBER OF SEQUENCES:

ADDRESSEE: BILO GATCHOUSE Road, Sulte 500 East

CONNESPONDENCE ADDRESS:

STATE: VITGINIA

STATE: VITGINIA

COUNTY: Falls Church

STATE: VITGINIA

COUNTY: U.S.A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

GENERAL INFORMATION:

APPLICANT: Novozywes Biotech, Inc.

APPLICANT: Connelly, Mariah

APPLICANT: Brody, Howard

APPLICANT: Brody, Methods For Producing Biological Substances In Enzyme-Deficient

TITLE OF INVENTION: Mutants Of Aspergillus Niger

TITLE OF INVENTION: Mutants Of Aspergillus Niger

TITLE OF INVENTION WINDER: US/10/815,495

CURRENT APPLICATION NUMBER: US/10/815,495

CURRENT FILING DATE: 2004-03-31

NUMBER OF SEQ ID NOS: 30

SOFTWARE: PatentIn version 3.2

SEQ ID NO 22

The sequence os that of the Asoergillus oryzae alpha amylase, sold commercially as FUNGAMY. (TM) by Novo Nordisk A/S. The sequence can be mutated by substitution of one or more of its methionine residues for any amino acid other than cysteine. The mutant alpha-amylase exhibits a better activity level and better stability in the presence of oxidising agents than previous mutant alpha amylases, and improved thermostability at moderately low pH. The enzyme can be used as an additive for detergents, dishwashing agents and liquifaction agents. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           **********

Oxidation stable alpha amylases can be used for the simultaneous desizing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                and bleaching or scouring of a fabric comprising starch or starch derivatives. They exhibit a better heat stability, especially in the presence of oxidising agents. They are obtained from a parent alpha amylase by replacing one or more methiconine residues with any amino acid different from Cys or Met, preferably Leu, Thr, Ala, Gly, Ser, Ile or Asp. The parent alpha amylase is pref. derived from a Bacillus species, although alpha amylases of fungal origin can also be used. This sequence is the wild type (unmodified) alpha amylase of Aspergillus oryzae
                                                                                                                                         Alpha amylase; oxidation; desizing; bleaching; scouring; fabric; starch; thermostable; methionine; Bacillus licheniformis; Bacillus amyloliquefaciens; Bacillus stearothermophilus;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Use of an oxidation stable alpha-amylase - for simultaneous desizing and bleaching or scouring of fabrics contg. starch or starch derivs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   alpha-amylase; mature; Bacillus licheniformis; termamyl; fungamyl; Aspergillus oryzae; Bacillus amyloliquefaciens; altered property; calcium dependency; substrate binding; stability; pH optimum; thermostability; cleavage; oligosaccharide substrate; dishwashing; washing; detergent additive; fabric desizing; starch liquefaction; sweetener; ethanol production; variant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Variant alpha amylase enzymes which have improved washing and/or as detergent additives. The enzymes have one or more amino acid residues added, deleted or substituted. The variants can also be used for textile desizing prior to scouring, blacching and dyeing. The variants have improved thermostability, acid/alkaline stability; low temperature optimum; higher hydrolysis velocity and improved tolerance to other composition constituents, e.g. oxidation agents. (Updated on 25-MAR-2003 to correct PN field.)

residue of a parent alpha-amylase (used as a template for a variant) corresponding to 196-198 of AAW14499 is deleted or replaced with a fragment corresponding to this
                                                                                                                                                                                                                                                               corresponding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is the mature Aspergillus oryzae alpha-amylase (A). Variants of parent termamyl- and fundamyl-like alpha-amylases (and methods of constructing them) are claimed. Examples of variants are featured above. The variants have altered properties such as calcium dependency, substrate binding and stability. Also one or more proline or cystein residues in the variant is modified or replaced with a non-proline or non-cystein residue such as alanine. The variants can be used for (dish)washing, as detergent additives or for fabric desizing or starch liquefaction. They can also be used for the production of
                                                                                                               Increasing amino acid fragment corresponding to this region is deleted from the parent sequence of a variant Fungamyl; claim 43".

The present invention relates to a method of producing heterologous hological substance. The method involves culturing mutant of wild-type Aspergillus niger strain in medium suitable for producing heterologous biological substance, where mutant strain comprises first nucleotide sequence encoding heterologous biological substance and second nucleotide heterologous biological substance and second nucleotide heterologous biological substance. The present sequence is the Aspergillus niger neutral alpha-amylase A (amyA) protein.
                                                                                                                                                                                                                                    Producing heterologous biological substance comprises culturing mutant of wild-type Aspergillus niger strain in medium suitable for producing heterologous biological substance and recovering heterologous biological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Producing heterologous biological substance comprises culturing mutant of wild-type Aspergillus niger strain in medium suitable for producing heterologous biological substance and recovering heterologous biological
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           100.0%; Score 13; DB 8; Length 498; 100.0%; Pred.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        셤
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents a fungamyl-like alpha-amylase. The specification describes variants of this fungamyl-like alpha-amylase, which have an alteration in one the amino acid regions 98-110, 150-160, 161-167, 280-288, 448-455, and 468-475. Each alteration is a deletion or substitution of an amino acid or an insertion of an amino acid downstream of a particular position. The variants retain alpha-amylase activity, and have better heat stability and/or stability at acidic pH, relative to wild-type enzyme. The variants can therefore be used at higher temperatures (more efficient conversion or faster reaction, and have reduced need for cooling and reduced risk of contamination). The variants may also be used in conjunction with other enzymes, particularly of high maltose content, or alcohol, from starch, as dough improver for baked goods; in brewing, to increase fermentability of the wort, and for liquefaction of starch
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New variant of Fungamyl-like alpha-amylase, useful for production of maltose syrups, includes mutations that improve stability against heat

The present invention relates to a method of producing heterologous biological substance. The method involves culturing mutant of wild-type Aspergillus niger strain in medium suitable for producing heterologous biological substance, where mutant strain comprises first nucleotide sequence encoding heterologous biological substance and second nucleotide sequences comprising modification of glucoamylase (glah) and recovering heterologous biological substance.
                                                                                                                                                                                                                             Aspergillus niger neutral alpha-amylase B (amyB) protein.

Novel polynucleotide encoding hyperthermophilic processing enzymes e.g. alpha-amylase, useful for producing plant to produce food products having improved taste or fermentable substrates for ethanol.

Claim 1; Page 107; 158pp; English

The present invention describes polynucleotides which encode processing enzymes (e.g. alpha-amylase, pullulanase, alpha-glucosidase, glucose enzymes, or glucoamylase) that are optimised for expression in plants. The polynucleotides encode mesophilic, thermophilic or hyperthermophilic processing enzymes, which are activated under suitable conditions to act upon the desired substrate. Also described are self-processing transgenic plants and plant parts, e.g. grain, which express one or more of these enzymes and have an altered composition that facilitates plant and grain processing. Also described is a method (M) for converting starch to starch-derived products in a transformed plant part (TPP), by activating the starch processing enzyme contained in it. Transgenic grain is useful for preparing maltodaxtrin. A transformed plant (TP) can be used to produce food products having improved taste and to produce fermentable

Novel isolated Aspergillus fumigatus polypeptide, useful in various industries such as those involved in the making of food and feed, Novel isolated Aspergillus fumigatus beverages, textiles and detergents.

Claim 17; Page 134-35; 169pp; English.

The sequences given in ABB80164-87 show enzymatic proteins derived from A. fumigatus. These proteins display the catalytic activity of an enzyme such as tannase, callulase, glucose oxidase, glucoamylase, phytase, betaglactosidases, invertase, lipase, alpha-amylase, laccase, polygalacturonase or xylanase. Compositions comprising the tannase are useful for modulating the amount of composition comprising the tannase are useful for modulating the amount of cellulose in a composition. Compositions comprising the amount of cellulose in a composition comprising phytase are useful for modulating the amount of myo-inositol phosphates in a composition. Composition comprising phytase are useful for modulating the amount of myo-inositol phosphates in a composition. Composition comprising comprising the amount of myo-inositol phosphates in a composition. Composition comprising comprising the amount of sucrose or invertase are useful for modulating the amount of sucrose in a composition. Compositions comprising sucrass or invertase are useful for modulating the amount of sucrose in a composition. Compositions comprising sucrass or invertase are useful for modulating the amount of sucrose in a composition comprising the amount of sucrose in a composition.

                                                                                                                                                             for attachment to a nucleic acid array for examination of expression patterns, and to raise anti-protein antibodies. The polypeptide having tannase activity increases the yield of tea liquor from tea leaves, improves the colour, flavour and health benefits of tea products, particularly an instant tea product. The polypeptide having cellulase activity enhances cleaning ability of detergent compositions
                                                                                                                                                                                                                                                                                                                                                                                                                                  Thermus sp. The present invention describes manufacturing maltogenic amylase (EC 3.2.1.133) having improved transglycosylation activity, comprising using crystallisation and the three dimensional structure of maltogenic

```
camylase. Manufacturing maltogenic amylase comprises the following steps:

(1) obtaining a gene of maltogenic amylase from Thermus sp. IM6501 (KCTC 5027BP) and inserting the gene into plasmid pUCL19 to construct recombinant DNA (pThMA119); (ii) inserting the recombinant DNA to construct crecombinant DNA (pThMA119); (iii) inserting the recombinant DNA to crecombinant DNA (pThMA119); (iii) inserting the recombinant DNA to construct or contain a microbial cell; (iii) suspending the microbial cell with buffer solution at pH 7.5 and obtaining supernateant; and (iv) passing the supernateant through column chromatography and obtaining purified camplase. The maltogenic amylase is a dimer comprised of two caltogenic amylase molecules, and a Thermus sp. IM6501 maltogenic amylase (ThMA) crystal. The amylase has a structure containing an activated region that consists of amino acid residues of Asp. 128, (Iu-357, Asp. 424, and a pocket with glucose bound that consists of amino acid residues of cand a pocket with glucose bound that consists of amino acid residues of Pro44, Tyr45, Arg81, Arg83, Pro118, Cys116, Ash1331, (Iu1332, Val1329, and Hisl360. The present sequence represents Aspergillus oryzae TAKA.

Cyctein (TAA), given in comparison with ThMA in the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present sequence is an alpha-amylase enzyme of the filamentous fungus Aspergillus niger. Alpha-amylases catalyse the endohydrolysis of 1.4-alpha-glucosidic linkages in oligosaccharides and polysaccharides. The alpha-amylase polynucleotides and polypeptides of the invention are useful in a baking process
                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polynucleotide from a filamentous fungus, preferably Aspergillus
niger, useful in a baking process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Alpha-amylase; enzyme; endohydrolysis; 1,4-alpha-glucosidic linkage; oligosaccharide; polysaccharide; baking.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Hopper S;
